SCHEME SPECIFIC RISK FACTORS

Some of the specific risk factors related to the Scheme include, but are not limited to the following:

Risks associated with investment in Equity and Equity related instruments

Equity and equity related securities are volatile and prone to price fluctuations on a daily basis. The liquidity of investments made in the Scheme may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme portfolio would result at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme portfolio.

The limited liquidity of the Scheme’s investments in the holdings of unlisted securities may be affected if they have to be sold prior to the target date for divestment. All investments involve risks and there can be no guarantee against loss resulting from an investment in any share of the Scheme, nor can there be any assurance that the Scheme’s investment objective will be attained in respect of its stated period. In certain circumstances the right of the investors of the Scheme may be suspended. Consequently, the NAVs of units issued under the Scheme may be adversely affected.

Further, the Equity and Equity Related Instruments are risk capital and are subordinate in the right of payment to other securities including debt securities, the value of the Scheme investments may be affected by interest rates, currency exchange rates, changes in law/ policies of the government, taxation laws and political, economic or other developments which may have an adverse bearing on Individual Securities, a specific sector or all sectors. Investments in equity and equity related securities involve a degree of risk and investors should not invest in the equity Schemes unless they can afford to take the risk of losing their investment.

The Fund Manager of the Scheme may invest in the Securities of smaller, lesser-known companies which may involve greater risk and the possibility of greater price volatility than investing in larger, more mature or better-known firms. Amongst other reasons for the greater price volatility of Securities of small companies and unseasoned stocks are the less certain growth prospects of smaller firms, the lower degree of liquidity of the markets for such stocks, and the greater sensitivity of small companies to changing economic conditions. For example, these companies are associated with higher investment risk than that normally associated with larger firms due to the greater business risks of small size and limited product lines, markets, distribution channels and financial and managerial resources. Such Securities, including those of newer or recently restructured companies or those which may have experienced financial difficulties, may be more volatile in price than larger capitalized stocks.

Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options. The AMC may choose to invest in unlisted securities that offer attractive yields within the regulatory limit. This may however increase the risk of the portfolio. Additionally, the liquidity and valuation of the Scheme investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of divestment.

The value of the Scheme investments may be affected by factors affecting capital markets generally, such as price and volume volatility in the stock markets, interest rates, exchange rates, political economic or other developments and closure of the stock exchanges. Investment made in unlisted equity or equity-related securities may only be realisable upon listing of these securities.

Trading volumes, settlement periods and transfer procedures may restrict liquidity of investments in equity and equity related securities. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The length of the settlement may affect the Scheme in the event the Scheme has to meet large number of redemption requests.

Risks associated with investments in Fixed Income Securities

Price-Risk or Interest - Rate Risk: Fixed income securities such as government bonds, corporate bonds debentures, and money market instruments and derivatives run price risk or interest - rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices depends upon the coupon and maturity of the security is a function of the time remaining to maturity, the duration, the convexity, days to maturity and the increase or decrease of the level of interest rates. It also depends upon the yield level at which the security is being traded.

Re-investment Risk: In investments in fixed income securities may carry re - investment risk as interest rates prevailing on the interest or coupon payment or maturity due dates may differ from the original coupon of the bond. Consequently, The proceeds may not be reinvested at a comparable interest rate.

Liquidity or Marketability Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market.

Pre-payment Risk: Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such pre-payment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.

Basis Risk: The underlying benchmark of a floating rate security or a swap might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio.

Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

Liquidity Risk: The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.

Credit Risk: In simple terms this risk means that the issuer of a debenture/bond or a money market instrument may default on interest payments or in paying back the principal amount on maturity. Even when there is no default occur, the price of a security may go down because the credit rating of an issuer goes down. It must, however is to be noted that where the Scheme has invested in Government securities, there is no credit risk to that extent.

Liquidity Risk on account of unlisted securities: The liquidity and valuation of the Scheme investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment. The unlisted security can go down after the dividend date before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio.

Liquidity Risk: This refers to the ease with which a security can be sold at or near to its valuation or yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer.

Settlement Risk: Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.

Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly the scheme’s risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds which are AAA rated, are comparatively more risky than bonds, which are AAA rated.

Risk Associate with Securitized Debt:

Securitized Debt: The Scheme in accordance with the asset allocation may invest in domestic and international securitized debt such as asset backed securities (ABS) or mortgage backed securities (MBS). ABS means securitized debts wherein the underlying assets are receivables arising from personal loans, automobile loans, etc. MBS means securitized debts wherein the underlying assets are receivables arising from loans backed by mortgage of properties which can be residential or commercial in nature. ABS/MBS instruments reflect the undivided interest in the underlying of assets and do not represent the obligation of the issuer of ABS/MBS or the originator of the underlying receivables. The ABS/MBS holders have a limited recourse to the extent of credit enhancement provided. ABS/MBS holders will suffer credit losses in the event of the delinquencies and credit losses in the underlying pool exceed the credit enhancement provided. ABS/MBS are normally exposed to a higher level of reinvestment risk. The fund intends to invest only in securitized instruments rated at least AA (SO) or its equivalent by a recognized credit rating agency. The securitized debt assets and the underlying asset classes like Housing Loans, Auto Loans and Corporate loans have the following risk factors:

A. Risk associated with Mortgage Backed Securities (MBS) - Housing Loans

Prepayment Risk: The Fund may receive payment of monthly payouts earlier than scheduled. Prepayments shorten the life of the instrument to an extent that cannot be fully predicted. The rate of prepayments may be influenced by a variety of economic, social and other factors.

Credit Risk: Delinquencies may happen which would reduce the principal amount. Typically MBS structures come with credit enhancement in variety of forms. If delinquencies are higher than the amount available in the credit enhancement facility, then the monthly payouts to the Fund would reduce. Historically, it has been observed that housing loans have lower default rates as compared to other forms of credit.

Liquidity Risk: Historically the secondary market volume for securitised products has been limited. This could limit the ability of the Fund to resell them. Secondary market trades could be at a discount or premium depending upon the prevailing interest rates.

Conversion Risk: Conversion of loans from fixed rates to floating rate loans and vice versa could lead to a change in the expected cash flows from the loans.

B. Risk associated with Asset Backed Securities (ABS) - Auto loans

Prepayment Risk: The Fund may receive payment of monthly payouts earlier than scheduled. Prepayments shorten the life of the instrument to an extent that cannot be fully predicted. The rate of prepayments may be influenced by a variety of economic, social and other factors. Prepayment in auto loans is lower than housing loans as the shorter tenor of auto loans makes it economically unattractive to prepay after considering the prepayment charges.
Credit Risk: Delinquencies may happen which would reduce the principal amount. Typically ABS structures come with credit enhancement in variety of forms. If delinquencies are higher than the amount available in the credit enhancement facility then the monthly payouts to the Fund would reduce. Typically auto loans carry higher risk than MBS as the value retention of the underlying asset is higher in MBS as compared to the underlying asset of ABS.

Liquidity Risk: Historically the secondary market volume of securitised papers has been limited. This could limit the ability of the Fund to resell them. Secondary market trades could be at a discount or premium depending upon the prevailing interest rates.

C. Risk associated with Asset Backed Securities (ABS) - Corporate loans

Credit Risk: The Fund has an exposure to the Borrower/Borrowers and servicing of the instrument depends on the credit risk of the borrower. The value of the instrument would fluctuate depending upon the changes in the perceived level of credit risk as well as any actual default.

Prepayment Risk: The Borrower may prepay the receivables prior to their respective due dates. This may result in a change in the yield and tenor for the Fund.

Limited Liquidity and Price Risk: Historically the secondary market volume of securitised papers has been limited. This could limit the ability of the Fund to resell them. Secondary market trades could be at a discount or premium depending upon the prevailing interest rates.

In terms of specific risks associated to securitization, each asset class would have different underlying risks. Residential Mortgages generally have lower default rates than other asset classes, but repossession becomes difficult. On the other hand, repossession and subsequent recovery of commercial vehicles and other auto assets is fairly easier and better compared to mortgages. Asset classes like personal loans, credit card receivables are unsecured and in an economic downturn may witness higher default. A corporate loan/receivable, depend upon the nature of the underlying security for the loan or the nature of the receivable and the risks correspondingly fluctuate.

The rating agencies define margins, over collateralization and guarantees to bring risk in line with similar AAA rated securities. The factors typically analyzed for any pool are as follows:

a) Assets securitized and Size of the loan: This indicates the kind of assets financed with the loan and the average ticket size of the loan. A very low ticket size might mean more costs in originating and servicing of the assets.

b) Diversification: Diversification across geographical boundaries and ticket sizes might result in lower delinquency.

c) Loan to Value Ratio: Indicates how much % value of the asset is financed by borrower’s own equity. The lower the better. This suggests that where the borrowers own contribution of the asset cost is high; the chances of default are lower.

d) Average seasoning of the pool: This indicates whether borrowers have already displayed repayment discipline. The higher the number, the more superior it is.

The other main risks pertaining to Securitised debt are as follows:

1. Prepayment Risk: This arises when the borrower pays off the loan sooner than expected. When interest rates decline, borrowers tend to pay off high interest loans with money borrowed at a lower interest rate, which shortens the average maturity of ABSs. However, there is some prepayment risk even if interest rates rise, such as when an owner pays off a mortgage when the house is sold or an auto loan is paid off when the car is sold.

2. Reinvestment Risk: Since prepayment risk increases when interest rates decline, this also introduces reinvestment risk, which is the risk that the principal can only be reinvested at a lower rate.

3. Risks associated with Short Selling: Purchasing a security entails the risk of the security price going down. Short selling of securities (i.e. sale of securities without owning them) entails the risk of the security price going up there by decreasing the profitability of the short position. Short selling is subject to risks related to fluctuations in market price, and settlement/liquidity risks. If required by the Regulations, short selling may entail margin money to be deposited with the clearing house and daily mark to market of the prices and margins. This may impact fund pricing and may induce liquidity risks if the fund is not able to provide adequate margins to the clearing house. Failure to meet margin requirements may result in penalties being imposed by the exchanges and clearing house.

Risk associated with investing in Derivatives

As and when Scheme trades in the derivatives market, there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Must ensure that the derivative will have performance benefits only and will have no adverse effects. The Scheme may enter into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the “counter party”) to comply with the terms of the derivatives contract. Other risk in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value. Derivatives can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Fund Manager to identify such opportunities. Identification and execution of the strategies to be pursued by the Fund Manager involve uncertainty and decision of Fund Manager may not always be profitable. No assurance can be given that the Fund Manager will be able to identify or execute such strategies. The risk associated with the use of derivatives is different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. Derivatives may be riskier than other types of investments because they may be more sensitive to changes in economic or market conditions than other types of investments and could result in the losses that significantly exceed the Scheme’s original investment. Certain derivatives may give rise to a form of leverage. Due to the low margin deposits normally required in trading financial derivative instruments, an extremely high degree of leverage is typical for trading in financial derivative instruments. As a result, the Scheme may be more volatile than if the Scheme had not been leveraged because the leverage tends to exaggerate the effect of any increase or decrease in the value of the Scheme’s portfolio. A relatively small price movement in a derivative contract may result in substantial losses to the investor.

Derivatives are also subject to the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index. The use of derivatives for hedging or risk management purposes or to increase income or gain may not be successful; resulting in losses to the Scheme and the cost of such strategies may reduce the Scheme’s returns and increase the Scheme’s potential for loss.

The Scheme may use derivatives to hedge market and currency risk, and for the purposes of efficient portfolio management. The use of derivatives may expose the Scheme to a higher degree of risk. In particular, derivative contracts can be highly volatile, and the amount of initial margin is generally small relative to the size of the contract so that transactions are geared.

The price at which credit default swaps trades may differ from the price of the credit default swaps’ referenced security. In adverse market conditions, the basis (difference between the spread bonds and the spread of credit default swaps) can be significantly more volatile than the credit default swaps’ referenced securities.

Trading in derivatives has the following risks:

a) To derivatives in excess of the hedging requirements can lead to losses.

b) An exposure to derivatives can also limit the profits from a genuine investment transaction.

c) Efficiency of a derivative market depends on the development of a liquid and efficient market for underlying securities.

d) Particular Risks of Exchange Traded Derivative Transactions

The securities exchange on which the shares of the Scheme may be listed may have the right to suspend or limit trading in all securities which it lists. Such a suspension would expose the Scheme to losses and delays in its ability to redeem shares of the Scheme.

e) Dividends/IDCW

The Scheme may distribute not only investment income, but also realised capital gains or capital. Where capital is distributed, this will result in a corresponding reduction in the value of shares of the Scheme, and a reduction in the potential for long-term capital growth.

f) Warrants

The Scheme may invest in warrants, the values of these warrants are likely to fluctuate more than the prices of the underlying securities because of the greater volatility of warrant prices.

g) Futures and Options

The Scheme may use options and futures on securities, indices and interest rates for the purpose of efficient portfolio management.

Transactions in futures and options carry a high degree of risk. A relatively small market movement will have a proportionately larger impact which may work for or against the investor. The placing of certain orders which are intended to limit losses to certain amounts may not be effective because market conditions may make it impossible to execute such orders.

h) Listing

In case the shares of the Scheme are listed, the exchanges on which those shares are listed will have no right to suspend or limit trading in all securities which are listed by the Scheme or will make no representations as to its accuracy or completeness and expressly disclaim any liability whatsoever for any kind of loss arising from or in reliance upon any part of any such prospectus.
i) Stock Market Fluctuations

Investors may note that the value of their investment may fall as well as rise and they may get back less than they originally invested. The value of equity securities may go down as well as up in response to the performance of individual companies and general market conditions.

Risk associated with Securities Lending:

It may be noted that this activity would have the inherent probability of collateral value drastically falling in times of strong downward market trends, rendering the value of collateral in question until such time the diminution in value is replenished by additional security. It is also possible that the borrowing party and/or the approved intermediary may suddenly suffer severe business set back and become unable to honour its commitments. This, along with a simultaneous fall in the value of collateral would result in potential loss to the Scheme. Besides, there will also be further potential illiquidity of the securities that are lent out and the Scheme will not be able to sell such lent out securities until they are returned.

Securities lending may involve the risk of default on the part of the borrower. However, this is unlikely to happen if the stock lending is carried out for stocks which are in demand. Market and through an authorised stock lending Scheme, subject to appropriate Regulations.

The Investment Manager perceives such situations to be exceptional in nature. Although the Stock Market in India is still developing, considering the good demand for listed/ quoted Equity Shares of reputed companies, the Scheme may choose to meet repurchase needs through temporary borrowings, within the permissible limits.

Risk associated with investment in Money Market Instruments:

Investments in money market instruments would involve a moderate credit risk i.e. risk of an issuer’s inability to meet interest and principal payments.

- Money market instruments may also be subject to price volatility due to factors such as changes in interest rates, the general level of market liquidity and market perception of creditworthiness of the issuer of such instruments.
- The NAV of the Units, to the extent that the corpus of the Scheme is invested in money market instruments, will be affected by changes in the level of interest rates. When interest rates in the market rise, the value of a portfolio of money market instruments can be expected to decline.

Other Risks:

Zero coupon or Deep Discount Bonds are debt obligations that do not entitle the holder to any periodic payment of interest prior to maturity or a specific date when the securities begin paying current interest and therefore, are generally issued and traded at a discount to their face value. The discount depends on the time remaining until maturity of the securities and interest rates prevailing at the time of purchase. As a result of time value of money, the market price of the securities is inversely related to interest rates. The NAV of the Units, to the extent that the corpus of the Scheme is invested in money market instruments, will be affected by changes in the level of interest rates. When interest rates in the market rise, the value of a portfolio of money market instruments can be expected to decline.

In the event of substantial investment by the Sponsor/s, or its associates in the Scheme, any redemption by these entities may have an impact on the performance of the Scheme.

Canara Robeco Mutual Fund will not be responsible for any loss of tax benefits in the event of winding up of the Scheme(s) or for any amendments in the tax laws that may affect the tax benefits available under the Scheme. The tax benefits are based on the present tax laws and ruling taxes.

Risk factors associated with investments in foreign securities/overseas investments/offshore securities:

- Subject to necessary approvals and within the investment objectives of the Scheme, the Scheme may invest in overseas markets which carry risks related to fluctuations in the foreign exchange rates, the nature of the securities market of the country, repatriation of capital due to exchange controls and political circumstances.
- Since the Scheme would invest only partially in foreign securities, there may not be readily available and widely accepted benchmarks to measure performance of such Scheme. To manage risks associated with foreign currency and interest rate exposure, the Fund may use derivatives for efficient portfolio management and hedging and portfolio rebalancing and in accordance with conditions as may be stipulated under the Regulations and by RBI from time to time.
- Investment in foreign Securities involves currency risk. To the extent that the assets of the Scheme will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of certain foreign currencies relative.

Risk associated with Short Selling

Purchasing a security entails the risk of the security price going down. Short selling of securities (i.e. sale of securities without owning them) entails the risk of the security price going up by the index appreciation or the profitability of the short position. Short selling is subject to risks related to fluctuations in market price, and settlement/liquidity risks. If required by the Regulations, short selling may entail margin money to be deposited with the clearing house and daily mark to market of the prices and margins. This may impact funding costs and may induce liquidity risks if the fund is not able to provide adequate margins to the clearing house. Failure to meet margin requirements may result in penalties being imposed by the exchanges and clearing house.

Risk Factors Associated with Investments in REITs and InvITs:

- Market Risk: REITs and InvITs Investments are volatile and subject to price fluctuations on a daily basis owing to factors impacting the underlying assets. AMC/Fund Manager’s will do the necessary due diligence but actual market movements may be at variance with the anticipated trends.
- Liquidity Risk: As the liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes, settlement periods, dissolution of the trust and potential delisting of units on the exchange etc, the time taken by the Mutual Fund for liquidating the investments in the scheme may be high in the event of immediate redemption requirement. Investment in such securities may lead to increase in the scheme portfolio risk.
- Reinvestment Risk: Investments in REITs & InvITs may carry reinvestment risk as there would be repatriation of funds by the Trusts in form of buyback of units or IDCW pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns.
- Regulatory/Legal Risk: REITs and InvITs being new asset classes, rights of unit holders such as right to information etc may differ from existing capital market asset classes under Indian Law.

Risks associated with investing in Tri Party Repo through CCIL (TREPSS):

All the market repo and Tri-party repo, are settled through Clearing Corporation of India Limited (CCIL). CCIL acts as a Central Counterparty (CCP) to all trades received for settlement. Risk of exposure in the TREPSS, Repos & Reverse Repos in Government Securities/Treasury Bills emanates mainly on two counts – Risk of failure by a lender to make funds available or by a borrower to provide adequate collateral security to accept the fund at the first leg of borrowing and lending under Tri-party Repo transaction or Repo transactions in Government Securities / treasury Bills. Risk of default by a borrower in repayment.

Risk factors associated with Creation of Segregated Portfolio

Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer. Security comprising of segregated portfolio may not realise any value. Listing of units of segregated portfolio of recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further, trading price of units on the stock market may be significantly lower than the prevailing NAV.

Risk Control Mechanism:

Since investing requires disciplined risk management, in order to protect the interests of investors, the AMC would incorporate adequate safeguards for controlling risks in the portfolio. As a prudent measure, the AMC has broad internal investment norms and investments made through the scheme would be in accordance with the investment objectives of the schemes and provisions of SEBI Regulations. Where required, scheme specific guidelines are also in place.

Debt Securities

Concentration of risk is mitigated by defining issuer limits. Rigorous in-depth credit evaluation of the issuers will be conducted by the investment team before making investments. As part of credit evaluation, a study on the operating environment, past performance and future prospects of the issuer is carried out. AMC/Fund Manager’s will do the necessary due diligence but actual market movements may be at variance with the anticipated trends.

Equity and Equity Related Instruments: Investments made by the schemes would be in accordance with the investment objectives of the schemes and provisions of SEBI Regulations. Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process. The risk control process involves reducing risks through portfolio diversification, taking care however not to dilute returns in the process. The AMC believes that this diversification would help achieve the desired level of consistency in investment returns. The aim of the AMC is to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, the investment team of the AMC will carry out rigorous in-depth analysis of the securities proposed to be invested in.

While these measures are expected to mitigate the above risks to a large extent, there can be no assurance that these risks would be completely eliminated.

Securitised Debt

As a risk control measure, the Scheme shall make investment in such Securitised Debts which have a minimum rating of P1+ and/or such other equivalent rating for short term papers or AAA and/or such other equivalent rating for long term papers which suits the risk profile of the Scheme.

The ratings AAA or its equivalent, P1+ or its equivalent assigned to instruments reflects highest degree of safety with regard to timely payment of financial obligations and the + sign reflects comparatively better standing within the category. Investments in these instruments with the highest ratings suit the risk profile of the Scheme relating to Debt and Equity Market Instruments, the same being “Low to Medium”. The investment shall be in those securitized debt instruments which mature on or before the maturity date of the Scheme and the Scheme shall not invest in any Pool of Assets.
Policy relating to Originator(s) – The Scheme shall invest in those Securitised Debt, whose Originator is a Corporate Entity, being a Bank or an NBFC. The Scheme shall invest in the instruments subject to necessary investment limits mentioned under SEBI regulations. Risk may be mitigated by seeking additional credit support (credit enhancement) in order that the instrument(s) may receive the desired level of credit rating. Prior to investing in Securitised Debt, it would be ensured that the minimum retention period of the debt and minimum retention percentage by the Originator prior to securitization shall be as prescribed by the RBI guidelines. Any investment in Securitised Debt has to go through an independent credit appraisal process and no special consideration shall be given to whether the Originator has invested in any Scheme(s) of Canara Robeco Mutual Fund.

Level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments – The Scheme shall not be investing in any pool of assets. Investment in securitized assets shall only be single loan securitized debt instruments backed by originator as referred above.

Resources and mechanism of individual risk assessment for monitoring investment in securitized debt – Dedicated credit analyst prepares a credit note analyzing the proposal including detailed risk assessment of the underlying. The credit note is reviewed and approved by the Fixed Income Head and a forward copy is sent to the Investment Committee. The dedicated credit analyst shall be responsible for timely analyzing the risk and monitoring the performance of such investments made on an ongoing basis and shall report to the committee the outstanding position, every quarter. While these measures are expected to mitigate the above risks to a large extent, there can be no assurance that these risks would be completely eliminated.

### Requirement of Minimum Investor in the Scheme

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. In case the Scheme does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (Mutual Funds) Regulations, 1996 would become applicable with an automatic redemption of the Scheme. No reference from SEBI and accordingly the Scheme would be wound up and the units would be redeemable at applicable NAV. The two conditions mentioned above shall be complied with in each subsequent calendar quarter on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days notice to redeem its exposure over the 25 % limit. Failure to act on the notice of the Scheme’s right to redeem his exposure over the 25% limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

20. Real Time Gross Settlement (RTGS) & National Electronic Funds Transfer (NEFT)

The AMC provides the facility of ‘Real Time Gross Settlement (RTGS)’ & ‘National Electronic Funds Transfer (NEFT)’ offered by Reserve Bank of India(RBI), which aims to provide credit of redemption and IDCW payments (if any) directly into the bank account of the Unit holder maintained with the banks (participating in the RTGS/NEFT System). Unit holders can check the list of banks participating in the RTGS/NEFT System from the RBI website i.e. www.rbi.org.in or contact any of our Investor Service Centres.

However, in the event of the name of Unit holder's bank not appearing in the “List of Banks participating in RTGS/NEFT” updated on RBI website www.rbi.org.in, from time to time, the instructions of the Unit holder for remittance of redemption/IDCW (if any) proceeds via RTGS/NEFT System will be discontinued by Canara Robeco Mutual Fund/ Canara Robeco Asset Management Company Limited without prior notice to the Unit holder and the payoffs of redemption/IDCW (if any) proceeds shall be effected by sending the Unit holder(s) a cheque/demand draft.

For more details on NEFT or for frequently asked questions (FAQs) on RTGS/NEFT, Unit holders are advised to visit the RBI website www.rbi.org.in

Electronic Clearing Service (ECS)*

Investors who have opted for the ECS facility of RFI for IDCW payment will receive a direct credit of the amount due to them in their mandated account whenever the payment is made through ECS. A separate advice regarding credit of amount(s) via ECS will be sent to the unit holder. It should be noted that while the Mutual Fund will make all efforts, there is no commitment that this facility will be made available to all desirous investors.

Applicants in cities not covered under ECS facility will receive IDCW payments, if any by cheques or demand drafts and the same will be mailed to the Unit holders. Please note that the ECS Facility is available only in respect of IDCW payments and not in the case of Redemption of Units. Therefore, the investors will receive their redemption/ IDCW proceeds (if any) directly into their bank accounts in the following order:

(i) In case the bank account of an investor is covered under RTGS/NEFT system offered by the RBI then the payment of redemption/IDCW proceeds (if any) shall be effected via RTGS/NEFT mechanism only.

(ii) The facility for payment of IDCW proceeds, if any via ECS* shall be effected only in case the bank account of an investor is not covered under the RTGS/NEFT system.

* available only in respect of IDCW payments.

Each of the above facilities aims to provide direct credit of the redemption proceeds and IDCW payouts (if any) into the bank account of the Unit holder and eliminates the time lag between despatch of the cheque, its receipt by the Unit holders and the need to personally bank the instrument and await subsequent credit to the Unit holders account. Further, the potential risk of loss of instruments in transit through courier/post is also eliminated. Each of the said facility as a mode of payment, is faster, safer and reliable. In case the bank account as communicated by the Unit holder is with any of the banks participating in the RTGS/NEFT System offered by RBI, the AMC shall automatically extend this facility to the Unit holders provided unitholders have furnished all requisite information to the AMC to receive such credits.

Canara Robeco Asset Management Company Limited/Canara Robeco Mutual Fund shall not be held liable for any losses/claims, etc. arising on account of processing the credit via RTGS/NEFT/ECS of redemption/IDCW proceeds on the basis of Bank Account details as provided by the unit holder in the Application Form.

Canara Robeco Asset Management Company Limited/Canara Robeco Mutual Fund shall not be liable for delayed receipt/non receipt of redemption/IDCW amount for reason of incomplete/inaccurate information provided by the unit holders

However, if the Unit holders are not keen on availing of any of the said facilities and prefer receiving cheques/demand drafts, Unit holders may indicate their intention in the Application Form in the space provided specifically. The AMC would then ensure that the payouts are effected by sending the Unit holders a cheque/demand draft. In case of unforeseen circumstances, the AMC reserves the right to issue a cheque/demand draft.
