Investment Strategy: Canara Robeco Short Duration Fund is an open ended short term debt fund investing in debt instruments having maturities of maximum 1 year and 3 years. The scheme will follow an active interest rate management strategy. Performance will depend on the Asset Management Company’s ability to assess accurately and react to general market conditions and changing financial characteristics of the security issuers.

The general maturity/Macaulay Duration range for the portfolio in relation to the market based on its interest rate outlook will be arrived at after a rigorous and close monitoring of various macro variables. The shifts within this range are then determined by short term cyclical trends in the economy, prevailing market conditions, prevailing market conditions & interest rate scenario, the portfolio Macaulay Duration and average maturity can be increased or decreased. In case of a rising interest rate environment the Macaulay Duration/average maturity of the scheme may be reduced whereas in a falling interest rate scenario the holding in medium / long maturities may be maximized.

The Investment Manager will actively monitor the prevailing political conditions, economic environment (including interest rates and inflation etc.), performance of the corporate sector and general liquidility as well as other considerations in the economy & markets to assess the likely direction of interest rates and to position the portfolio appropriately to take advantage of the same. It is the responsibility of the AMC to ensure that the investments are made as per the regulatory guidelines, the investment objective of the Scheme and in the interest of the Unit holders of the Scheme. SCHEME SPECIFIC RISK FACTORS

Some of the specific risk factors related to the Scheme include, but are not limited to
the following:

Risks associated with investments in Fixed Income Securities

Price Risk or Interest Rate Risk: Fixed income securities such as government bonds, corporate bonds debentures, and money market instruments and derivatives run price risk or interest rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices depends upon the coupon and maturity of the security is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. It also depends upon the yield level at which the security is being traded.

Re-investment Risk: Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or coupon payment or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

Liquidity or Marketability Risk: This refers to the ease with which a security can be sold at or near to its yield to maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market.

Pre-payment Risk: Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.

Basis Risk: The underlying benchmark of a floating rate security or a swap might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio.

Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

Liquidity Risk: The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.

Credit Risk: In simple terms this risk means that the issuer of a debenture/bond or a money market instrument may default on interest payments or in paying back the principal amount on maturity. Even when there is no default occurs, the price of a security may go down because the credit rating of an issuer goes down. It must, however is to be noted that where the Scheme has invested in Government securities, there is no credit risk to that extent.

Liquidity Risk on account of unlisted securities: The liquidity and valuation of the Scheme investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment. The unlisted security can go down in value before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio.

Liquidity Risk: This refers to the ease with which a security can be sold at or near to its valuation or yield to maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer.

Settlement Risk: Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.

Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly the scheme’s risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds, which are AA rated, are comparatively more risky than bonds, which are AAA rated.

Risk Associate with Securitized Debt:

Securitized Debt: The Scheme in accordance with the asset allocation may invest in domestic securitized debt such as asset backed securities (ABS) or mortgage backed securities (MBS). ABS means securitized debts wherein the underlying assets are receivables arising from personal loans, automobile loans, etc. MBS means securitized debts wherein the underlying assets are receivables arising from loans backed by mortgage of properties which can be residential or commercial in nature. ABS/MBS instruments reflect the undivided interest in the underlying of assets and do not represent the obligation of the issuer of ABS/MBS or the originator of the underlying receivables. The ABS/MBS holders have a limited recourse to the extent of credit enhancement provided. ABS/MBS holders will suffer credit losses in the event of the delinquencies and credit losses in the underlying pool exceed the credit enhancement provided. As compared to the normal corporate or sovereign debt, ABS/MBS are normally exposed to a higher level of reinvestment risk. The fund intends to invest only in securitized instruments rated at least AA (SO) or its equivalent by a recognized credit rating agency. The securitized debt assets and the underlying asset classes like Housing Loans, Auto Loans and Corporate loans have the following risk factors:

A. Risk associated with Mortgage Backed Securities (MBS) - Housing Loans

Repayment Risk: The Fund may receive payment of monthly payouts earlier than scheduled. Prepayments shorten the life of the instrument to an extent that cannot be fully predicted. The rate of prepayments may be influenced by a variety of economic, social and other factors.

Credit Risk: Delinquencies may happen which would reduce the principal amount. Typically ABS structures come with credit enhancement in variety of forms. If delinquencies are higher than the amount available in the credit enhancement facility, then the monthly payouts to the Fund would reduce. Historically, it has been observed that housing loans have lower default rates as compared to other forms of credit.

Liquidity Risk: Historically the secondary market volume for securitised papers has been limited. This could limit the ability of the Fund to resell them. Secondary market trades could be at a discount or premium depending upon the prevailing interest rates.

Conversion Risk: Conversion of loans from fixed rates to floating rate loans and vice versa could lead to a change in the expected cash flows from the loans.

B. Risk associated with Asset Backed Securities (ABS)-Auto loans

Prepayment Risk: The Fund may receive payment of monthly payouts earlier than scheduled. Prepayments shorten the life of the instrument to an extent that cannot be fully predicted. The rate of prepayments may be influenced by a variety of economic, social and other factors.

Credit Risk: Delinquencies may happen which would reduce the principal amount. Typically ABS structures come with credit enhancement in variety of forms. If delinquencies are higher than the amount available in the credit enhancement facility, then the monthly payouts to the Fund would reduce. Typically auto loans carry higher risk than MBS as the value retention of the underlying asset is higher in MBS as compared to the underlying asset of ABS.

Liquidity Risk: Historically the secondary market volume of securitised papers has been limited. This could limit the ability of the Fund to resell them. Secondary market trades could be at a discount or premium depending upon the prevailing interest rates.

C. Risk associated with Asset Backed Securities (ABS) - Corporate loans

Credit Risk: The Fund has an exposure to the Borrower/Borrowers and servicing of the instrument depends on the credit risk of the borrower. The value of the instrument would fluctuate depending upon the changes in the perceived level of credit risk as well as any actual default.

Prepayment Risk: The Borrower may prepay the receivables prior to their respective due dates. This may result in a change in the yield and tenor for the Fund.

Limited Liquidity and Price Risk: Historically the secondary market volume of securitised papers has been limited. This could limit the ability of the Fund to resell them. Secondary market trades could be at a discount or premium depending upon the prevailing interest rates.

In terms of specific risks attached to securitization, each asset class would have different underlying risks. Residential Mortgages generally have lower default rates than other asset classes, but repossession becomes difficult. On the other hand, repossession and subsequent recovery of commercial vehicles and other auto assets is fairly easier and better compared to mortgages. Asset classes like personal loans, credit card receivables are unsecured and in an economic downturn may witness higher default. A corporate loan/receivable, depend upon the nature of the underlying security for the loan or the nature of the receivable and the risks correspondingly fluctuate.

The rating agencies define margins, over collateralization and guarantees to bring risk in line with similar AAA rated securities. The factors typically analyzed for any pool are as follows:

a. Assets securitized and Size of the loan: This indicates the kind of assets financed with the loan and the average ticket size of the loan. A very low ticket size might mean more costs in originating and servicing of the assets.

b. Diversification: Diversification across geographical boundaries and ticket sizes might result in lower delinquency.

c. Loan to Value Ratio: Indicates how much % value of the asset is financed by borrower’s own equity. The lower this value the better it is. This suggests that where the borrowers own contribution of the asset cost is high, the chances of default are lower.

d. Average seasoning of the pool: This indicates whether borrowers have already displayed repayment discipline. The higher the number, the more superior it is.
The other main risks pertaining to Securitised debt are as follows:

1. **Prepayment Risk:** This arises when the borrower pays off the loan sooner than expected. When interest rates decline, borrowers tend to pay off high interest loans with money borrowed at a lower interest rate, which shortens the average maturity of ABSs. However, there is some prepayment risk even if interest rates rise, such as when an owner pays off a mortgage when the house is sold or an auto loan is paid off when the car is sold.

2. **Reinvestment Risk:** Since prepayment risk increases when interest rates decline, this also introduces reinvestment risk, which is the risk that the principal can only be reinvested at a lower rate

3. **Risks associated with Short Selling:** Purchasing a security entails the risk of the security price going down. Short selling of securities (i.e. sale of securities without owning them) entails the risk of the security price going up there by decreasing the profitability of the short position. Short selling is subject to risks related to fluctuations in market price, and settlement/liquidity risks. If required by the Regulations, short selling may entail margin money to be deposited with the clearing house and daily mark to market of the prices and margins. This may impact fund pricing and may induce liquidity risks if the fund is not able to provide adequate margins to the clearing house. Failure to meet margin requirements may result in penalties being imposed by the exchanges and clearing house.

**Risk associated with investing in Derivatives**

As and when Scheme trades in the derivatives market, there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that losses may be sustained by the portfolio as a result of the failure of another party (usually referred as the “counter party”) to comply with the terms of the derivatives contract. Other risk in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value. Derivatives can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Fund Manager to identify such opportunities. Identification and execution of the strategies to be pursued by the Fund Manager involve uncertainty and decision of Fund Manager may not always be profitable. No assurance can be given that the Fund Manager will be able to identify or execute such strategies. The risk associated with the use of derivatives is different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. Derivatives may be riskier than other types of investments because they may be more sensitive to changes in economic or market conditions than other types of investments and could result in the losses that significantly exceed the Scheme’s original investment. Certain derivatives may give rise to a form of leverage. Due to the low margin deposits normally required in trading financial derivative instruments, an extremely high degree of leverage is typical for trading in financial derivative instruments. As a result, the Scheme may be more volatile than if the Scheme had not been leveraged because the leverage tends to exaggerate the effect of any increase or decrease in the value of the Scheme’s portfolio. A relatively small price movement in a derivative contract may result in substantial losses to the investor.

Derivatives are also subject to the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index. The use of derivatives for hedging or risk management purposes or to increase income or gain may not be successful; resulting in losses to the Scheme and the cost of such strategies may reduce the Scheme’s returns and increase the Scheme’s potential for loss.

The Scheme may use derivatives to hedge market and currency risk, and for the purposes of efficient portfolio management. The use of derivatives may expose the Scheme to a higher degree of risk. In particular, derivative contracts can be highly volatile, and the amount of initial margin is generally small relative to the size of the contract so that transactions are geared.

The price at which credit default swaps trades may differ from the price of the credit default swaps’ referenced security. In adverse market conditions, the basis (difference between the spread bonds and the spread of credit default swaps) can be significantly more volatile than the credit default swaps’ referenced securities.

**Trading in derivatives has the following risks:**

a) To derivatives in excess of the hedging requirements can lead to losses.

b) An exposure to derivatives can also limit the profits from a genuine investment transaction.

c) Efficiency of a derivative market depends on the development of a liquid and efficient market for underlying securities.

d) **Particular Risks of Exchange Traded Derivative Transactions**

The securities exchange on which the shares of the Scheme may be listed may have the right to suspend or limit trading in all securities which it lists. Such a suspension would expose the Scheme to losses and delays in its ability to redeem shares of the Scheme.

e) **Dividends/IDCW**

The Scheme may distribute not only investment income, but also realised capital gains or capital. Where capital is distributed, this will result in a corresponding reduction in the value of shares of the Scheme, and a reduction in the potential for long-term capital growth.

f) **Warrants**

The Scheme may invest in warrants, the values of these warrants are likely to fluctuate more than the prices of the underlying securities because of the greater volatility of warrant prices.

g) **Futures and Options**

The Scheme may use options and futures on securities, indices and interest rates for the purpose of efficient portfolio management. Transactions in futures and options carry a high degree of risk. A relatively small market movement will have a proportionately larger impact which may work for or against the investor. The placing of certain orders which are intended to limit losses to certain amounts may not be effective because market conditions may make it impossible to execute such orders.

h) **Listing**

In case the shares of the Scheme are listed, the exchanges on which those shares are listed will have no responsibility for the contents of any prospectus issued by the Scheme or will make no representations as to its accuracy or completeness and expressly disclaim any liability whatsoever for any kind of loss arising from or in reliance upon any part of any such prospectus.

i) **Stock Market Fluctuations**

Investors may note that the value of their investment may fall as well as rise and they may get back less than they originally invested. The value of equity securities may go down as well as up in response to the performance of individual companies and general market conditions.

**Risk associated with Securities Lending:**

It may be noted that this activity would have the inherent probability of collateral value drastically falling in times of strong downward market trends, rendering the value of collateral inadequate until such time as the diminution in value is replenished by additional security. It is also possible that the borrowing party and/or the approved intermediary may suddenly suffer severe business set back and become unable to honour its commitments. This, along with a simultaneous fall in the value of collateral would render potential loss to the Scheme. Besides, there will also be temporary illiquidity of the securities that are lent out and the Scheme will not be able to sell such lent out securities until they are returned.

Securities lending may involve the risk of default on the part of the borrower. However, this is unlikely to happen if the stock lending is carried out for stocks which are in dematerialised form and through an authorised stock lending Scheme, subject to appropriate Regulations.

The Investment Manager perceives such situations to be exceptional in nature. Although the Stock Market in India is still developing, considering the good demand for listed/ quoted Equity Shares of reputed companies, the Scheme may choose to meet repurchase needs through temporary borrowings, within the permissible limits.

**Risk associated with investment in Money Market Instruments:**

Investments in money market instruments would involve a moderate credit risk i.e. risk of an issuer’s inability to meet interest and principal payments.

- Money market instruments may also be subject to price volatility due to factors such as changes in interest rates, the general level of market liquidity and market perception of creditworthiness of the issuer of such instruments.
- The NAV of the Units, to the extent that the corpus of the Scheme is invested in money market instruments, will be affected by changes in the level of interest rates. When interest rates in the market rise, the value of a portfolio of money market instruments can be expected to decline.
Other Risks:
Zero coupon or Deep Discount Bonds are debt obligations that do not entitle the holder to any periodic payment of interest prior to maturity or a specific date when the security is redeemed; hence investments in such issues often sell at a discount to their face value. The discount depends on the time remaining until maturity or the date when securities begin paying current interest. It also varies depending on current interest rates, liquidity of the security and the perceived credit risk of the issuer. The market rates of zero coupon securities are generally more volatile than the market price of securities that pay interest periodically and are likely to respond to changes in interest rates to a greater degree than other coupon bearing securities and therefore, the risk of capital loss increases.

In the event of substantial investment by the Sponsor/s, or its associates in the Scheme, any redemption by these entities may have an impact on the performance of the Scheme.

Canara Robeco Mutual Fund will not be responsible for any loss of tax benefits in the event of default by the Sponsor/s or for any amendments in the tax laws that may affect the tax benefits available under the Scheme. The tax benefits are based on the present laws and rules in force.

**Risks associated with investing in foreign securities/overseas investments/offshore securities**

- Subject to necessary approvals and within the investment objectives of the Scheme, the Scheme may invest in overseas markets which carry risks related to fluctuations in the foreign exchange rates, the nature of the securities market of the country, repatriation of capital due to exchange controls and political circumstances.
- Since the Scheme would invest only partially in foreign securities, there may not be readily available and widely accepted benchmarks to measure performance of such Scheme. To manage risks associated with foreign currency and interest rate exposure, the AMC may employ derivatives, managed portfolio rebalancing and hedging and portfolio rebalancing and in accordance with conditions as may be stipulated under the Regulations and by RBI from time to time.
- Investment in Foreign Securities involves a currency risk. To the extent that the assets may be invested in foreign denominated currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of certain foreign currencies relative to the Indian Rupee.

**Risks associated with Short Selling**

Purchasing a security entails the risk of the security price going down. Short selling of securities (i.e. sale of securities without owning them) entails the risk of the security price going up there by decreasing the profitability of the short position. Short selling is subject to risks related to fluctuations in market price, and settlement/liquidity risks. If required by the Regulations, short selling may entail margin money to be deposited with the clearing house and daily mark to market of the prices and margins. This may impact fund pricing and may induce liquidity risks if the fund is not able to provide adequate margin to the clearing house. Failure to meet margin requirements may result in penalties being imposed by the exchanges and clearing house.

**Risk Factors Associated with Investments in REITs and InvITs:**

- **Market Risk:** REITs and InvITs Investments are volatile and subject to price fluctuations on a daily basis owing to factors impacting the underlying assets. AMC/Fund Manager’s will do the necessary due diligence but actual market movements may be at variance with the anticipated trends.
- **Liquidity Risk:** As the liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes, settlement periods, dissolution of the trust, potential delisting of units on the exchange etc, the time taken by the Mutual Fund for liquidating the investments in the scheme may be high in the event of immediate redemption requirement. Investment in such securities may lead to increase in the scheme portfolio risk.
- **Reinvestment Risk:** Investments in REITs & InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or dividend pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns.
- **Regulatory/Legal Risk:** REITs and InvITs being new asset classes, rights of unit holders such as right to information etc may differ from existing capital market laws. Therefore, such investments may also be subject to regulation pending any changes in the regulations.

**Risk factors associated with Creation of Segregated Portfolio**

Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer. Security comprising of segregated portfolio may not realise any value, listing of units of segregated portfolio in recognised stock exchanges does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further, trading price of units on the stock market may be significantly different from the prevailing NAV.

**Risk Control Mechanism:**

- Since investing requires disciplined risk management, in order to protect the interests of investors, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process. The risk control process involves reducing risks through portfolio diversification, taking care however not to dilute returns in the process. The AMC believes that this diversification would help achieve the desired level of consistency in returns. The AMC aims to identify securities, which offer superior levels of yield at lower levels of risk. With the aim of achieving this, the AMC will carry out rigorous in-depth analysis of the securities proposed to be invested in.
- While these measures are expected to mitigate the above risks to a large extent, there can be no assurance that these risks would be completely eliminated.

**Securitised Debt**

As a risk control measure, the Scheme shall make investment in such Securitised Debt Instruments only with a minimum rating of PI+ and/or such other equivalent rating for short term papers or AAA and/or such other equivalent rating for long term papers which suits the risk profile of the Scheme.

The ratings AAA or its equivalent, PI+ or its equivalent assigned to instruments reflects highest degree of safety with regard to timely payment of financial obligations and the + signifies the instrument is superior comparatively. If the rating by these agencies are in these instruments with the highest ratings suit the risk profile of the Scheme relating to Debt and Money Market Instruments, the same being “low to Medium”. The investment team of the AMC will ensure that the said securities which the ratings suit the risk profile of the Scheme and the Scheme shall not invest in any Pool of Assets.

Policy relating to Originator(s) – The Scheme shall invest in those Securitised Debt, whose Originator is a Corporate Entity, being a Bank or an NBFC. The Scheme shall invest in the instruments subject to necessary investments limit mentioned under SEBI regulations. Risk may be mitigated by seeking additional credit support (credit enhancement) in order that the instrument(s) may receive the desired level of credit rating. Further, prior to investing in Securitised Debt Instruments, it is understood that the originator shall ensure that the minimum retention period of the debt and minimum retention percentage by the Originator prior to securitization shall be as prescribed by the RBI guidelines. Any investment in Securitised Debt has to go through an independent credit appraisal process. The AMC will evaluate whether the Originator has invested in any Scheme(s) of Canara Robeco Mutual Fund.

Level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments – The Scheme shall not be investing in any single asset class. Investment in securitized asset shall only be single loan securitized debt instruments backed by originator as referred above.

Resources and mechanism of individual risk assessment for monitoring investment in securitized debt – Dedicated credit analyst prepares a credit note analyzing the proposal including detailed risk assessment of the underlying. The credit note is reviewed by the Head of Credit Risk and the risk assessment is shared with the Investment Committee. The dedicated credit analyst shall be responsible for timely analyzing the market and monitoring the performance of such investments made on an ongoing basis and shall report to the investment committee the outstanding position, every quarter.

directed AMCs to keep B-30 incentive structure in abeyance with effect from March

An illustration:
Assuming, an investor has invested Rs.10, 000/- in the scheme having total expense
ratio of 2.00%. The scheme generated a CAGR return of 10% over one year. Therefore,
Investment Amount (Rs.) (A) = 10,000
Scheme Return (Year) in CAGR (%) (B) = 10%
Return in One Year (Rs.) C = (A)*(1+B) = 1,000
Total Expense Ratio (%) (D) = 2.00%
Impact of Total Expense Ratio (Rs.) E=A*D = 200
Total Return to the investor (Rs.) = (C-E) = 800
As mentioned in the illustration above, the schemes return to the investor is impacted
by 2.00% due to the expense charged.
Please note that the above is an approximate illustration of the impact of expense ratio
on the returns, where the Gross NAV has been simply reduced to the extent of the
treasury. In reality, the actual impact would vary depending on the path of returns
over the period of consideration. Expenses will be charged on daily net assets. These
estimates have been made in good faith as per the information available to the
Investment Manager based on past experience but the total expenses shall not exceed
the limits permitted by SEBI. Types of expenses charged shall be as per the SEBI (MF)
Regulations. The purpose of the above illustration is to assist the investor in understanding
the various costs and expenses that an investor in the scheme will bear directly or indirectly.
Goods and Service Tax (GST):
GST shall be charged as follows:
• GST on investment and advisory fees shall be charged to the Scheme in addition to
the maximum limit on TER as prescribed in Regulation 52 (6) of the SEBI (MF)
Regulations,
• GST on other than investment and advisory fees, if any, shall be borne by the
Scheme within the maximum limit on TER as prescribed in Regulation 52 (6) of the
SEBI (MF) Regulations.
• GST on brokerage and transaction cost paid for execution of trade, if any, shall be

Additionally, the CRAMC will disclose the Total Expense Ratio (TER) of the Scheme on daily basis on the website of the Mutual Fund (www.canararobeco.com) and on the website of AMFI (www.amfindia.com).
Provided that any increase or decrease in TER in a mutual fund scheme due to change in
AUM and any decrease in TER in a mutual fund scheme due to various other
Regulatory requirements would not require issuance of any prior notice to the investors.
Further, any change in the base TER (i.e. TER excluding additional expenses provided in
Regulation 52 (6A) and 52 (6A) (c) of SEBI (Mutual Funds) Regulations, 1996) and Goods & Services Tax on investment and advisory fees in comparison to previous base TER charged to the Scheme/Plan shall be communicated to investors of the Scheme/Plan through notice via email or SMS and will be uploaded on the website (www.canararobeco.com) at least three working days prior to effecting such change.

Potential Risk Class (PRC) Matrix:
Pursuant to the provisions of SEBI Circular no. SEBI/HO/IMD/IMD-II DOF3/P/CIR/2021/573 dated June 07, 2021, all debt schemes are required to be classified in terms of a Potential Risk Class matrix consisting of parameters based on maximum interest rate risk (measured by Macaulay Duration (MD) of the scheme) and maximum credit risk (measured by Credit Risk Value (CRV) of the scheme). Mutual Funds are required to disclose the PRC matrix (i.e. maximum risk that a fund manager can take in a Scheme) along with the mark for the cell in which the Scheme resides on the front page of initial offering application form, SID, KIM, common application form and scheme advertisements in the manner as prescribed in the said circular. The scheme would have the flexibility to take interest rate risk and credit risk below the maximum risk as stated in the PRC matrix. Subsequently, once a PRC cell selection is done by the Scheme, any change in the positioning of the Scheme into a cell resulting in a risk (in terms of credit risk or duration risk) which is higher than the maximum risk specified for the chosen PRC cell, shall be considered as a fundamental attribute change of the Scheme in terms of Regulation 18(15A) of SEBI (Mutual Fund) Regulations, 1996.

Mandatory Swing Pricing Framework for market dislocation:
With a view of safeguarding the interest of small investors against any large redemptions, SEBI vide its circular SEBI/HO/IMD/IMD-II DOF3/P/CIR/2021/531 dated September 29, 2021 introduced provisions pertaining to Swing Pricing Framework for open ended debt schemes (except overnight funds, Gift funds and Gift with 10-year maturity funds) with effect from May 01, 2022.

In view of the provisions mentioned in aforesaid circular, a mandatory full swing pricing framework, during market dislocation times (as and when declared by SEBI), is being introduced in all open ended debt schemes of Canara Robeco Mutual Fund (except overnight funds, Gift funds and Gift with 10-year maturity funds) as given below:

Meaning of Swing Pricing:
Swing pricing refers to a process for adjusting a fund’s Net Asset Value (NAV) to effectively pass on transaction costs stemming from net capital activity (i.e., flows into or out of the fund) to the investors associated with that activity during the life of a fund, excluding ramp-up period or termination. In other words, Swing Pricing is an anti-dilution technique which helps funds manage liquidity risks internally by effectively passing on transaction costs to the unitholder/investors associated with that activity. In a liquidity-challenged environment, quoted bid/ask spreads and overall trading cost can widen and may not be representative of the executed prices that can be achieved in the market. In such circumstances, swing pricing can be a useful mechanism to contribute to protect the interests of existing investors, specifically from the dilution of their holdings; and contribute to protect the value of the investors capital.

Applicability of Swing Pricing Framework:
The swing pricing framework will be made applicable only for scenarios related to net outflows from the debt schemes.

SEBI will determine ‘market dislocation’ either based on AMFI’s recommendation or suo moto. Once market dislocation is declared, it will be notified by SEBI that swing pricing will be applicable for a specified period.

Subsequent to the announcement of market dislocation, the swing pricing framework shall be mandated only for open ended debt schemes which:
1. Have “High” or “Very High” risk on the risk-o-meter (as of the most recent period at the time of declaration of market dislocation) and
2. Potential Risk Class (PRC) cells A-III, B-II, B-III, C-I, C-II and C-III

Minimum swing factor for open ended debt schemes:
Following mandatory swing factor will be applied on redemption and subscription transactions in the above mentioned schemes during market dislocation period announced by SEBI:

Applicability of Swing Pricing to Investors:
When swing pricing mechanism is triggered and swing factor is made applicable during market dislocation, both the incoming and outgoing investors shall get NAV adjusted for swing factor. Swing pricing shall be made applicable to all unitholders at PAN level, with an exemption for redemptions up to Rs. 2 lakhs for each mutual fund scheme for market dislocation.

Real Time Gross Settlement (RTGS) & National Electronic Funds Transfer (NEFT)

The AMC provides the facility of ‘Real Time Gross Settlement (RTGS)’ & ‘National Electronic Funds Transfer (NEFT)’ offered by Reserve Bank of India (RBI), which aims to provide direct credit of the redemption proceeds and IDCW payments to the account of the Unit holder maintained with the banks participating in the RTGS/NEFT System. However, in the event of the name of Unit holder’s bank not appearing in the “List of Banks participating in RTGS/NEFT” updated on RBI website www.rbi.org.in, from time to time, the instructions of the Unit holder for remittance of redemption/IDCW (if any) proceeds via RTGS/NEFT System will be discontinued by Canara Robeco Mutual Fund/ Canara Robeco Asset Management Company Limited without prior notice to the Unit holder and the payouts of redemption/IDCW (if any) proceeds shall be effected by sending the Unit holder(s) a cheque/demand draft.

For more details on NEFT or for frequently asked questions (FAQs) on RTGS/NEFT, Unit holders are advised to visit the RBI website www.rbi.org.in

Electronic Clearing Service (ECS)*

Investors who have opted for the ECS facility of RFI for IDCW payment will receive a direct credit of the amount due to them in their mandated account whenever the payment is made through ECS. A separate advice regarding credit of amount(s) via ECS will be sent to the unit holder. It should be noted that while the Mutual Fund will make all efforts, there is no commitment that this facility will be made available to all desirous investors.

Applicants in cities not covered under ECS facility will receive IDCW payments , if any by cheques or demand drafts and the same will be mailed to the Unitholders. Please note that the ECS Facility is available only in respect of IDCW payments and not in the case of Redemption of Units. Therefore, the investors will receive their redemption/IDCW proceeds (if any) directly into their bank accounts in the following order:

(i) In case the bank account of an investor is covered under RTGS/NEFT system offered by the RBI then the payment of redemption/IDCW proceeds (if any) shall be effected via RTGS/NEFT mechanism only.

(ii) The facility for payment of IDCW proceeds, if any via ECS* shall be effected only in case the bank account of an investor is not covered under the RTGS/NEFT system.

* available only in respect of IDCW payments.

Each of the above facilities aims to provide direct credit of the redemption proceeds and IDCW payouts (if any) into the bank account of the Unit holder and eliminates the time lag between despatch of the cheque, its receipt by the Unit holders and the need to personally bank the instrument and await subsequent credit to the Unit holders account. Further, the potential risk of loss of instruments in transit through courier/post is also eliminated. Each of the said facility as a mode of payment, is faster, safer and reliable. In case the bank account as communicated by the Unit holder is with any of the banks participating in the RTGS/NEFT System offered by RBI, the AMC shall automatically extend this facility to the Unit holders provided unitholders have furnished all requisite information to the AMC to receive such credits.

Canara Robeco Asset Management Company Limited/Canara Robeco Mutual Fund shall not be held liable for any losses/claims, etc. arising on account of processing the credit via RTGS/NEFT/IDCW of redemption/IDCW proceeds on the basis of Bank Account details as provided by the unit holder in the Application Form.

Canara Robeco Asset Management Company Limited/Canara Robeco Mutual Fund shall not be liable for delayed receipt/non receipt of redemption/IDCW amount for reason of incomplete/inaccurate information provided by the unit holders

However, if the Unit holders are not keen on availing of any of the said facilities and prefer receiving cheques/demand drafts, Unit holders may indicate their intention in the Application Form in the space provided specifically. The AMC would then ensure that the payouts are effected by sending the Unit holder a cheque/demand draft. In case of unforeseen circumstances, the AMC reserves the right to issue a cheque/demand draft.
