WHAT IS INCOME FUND

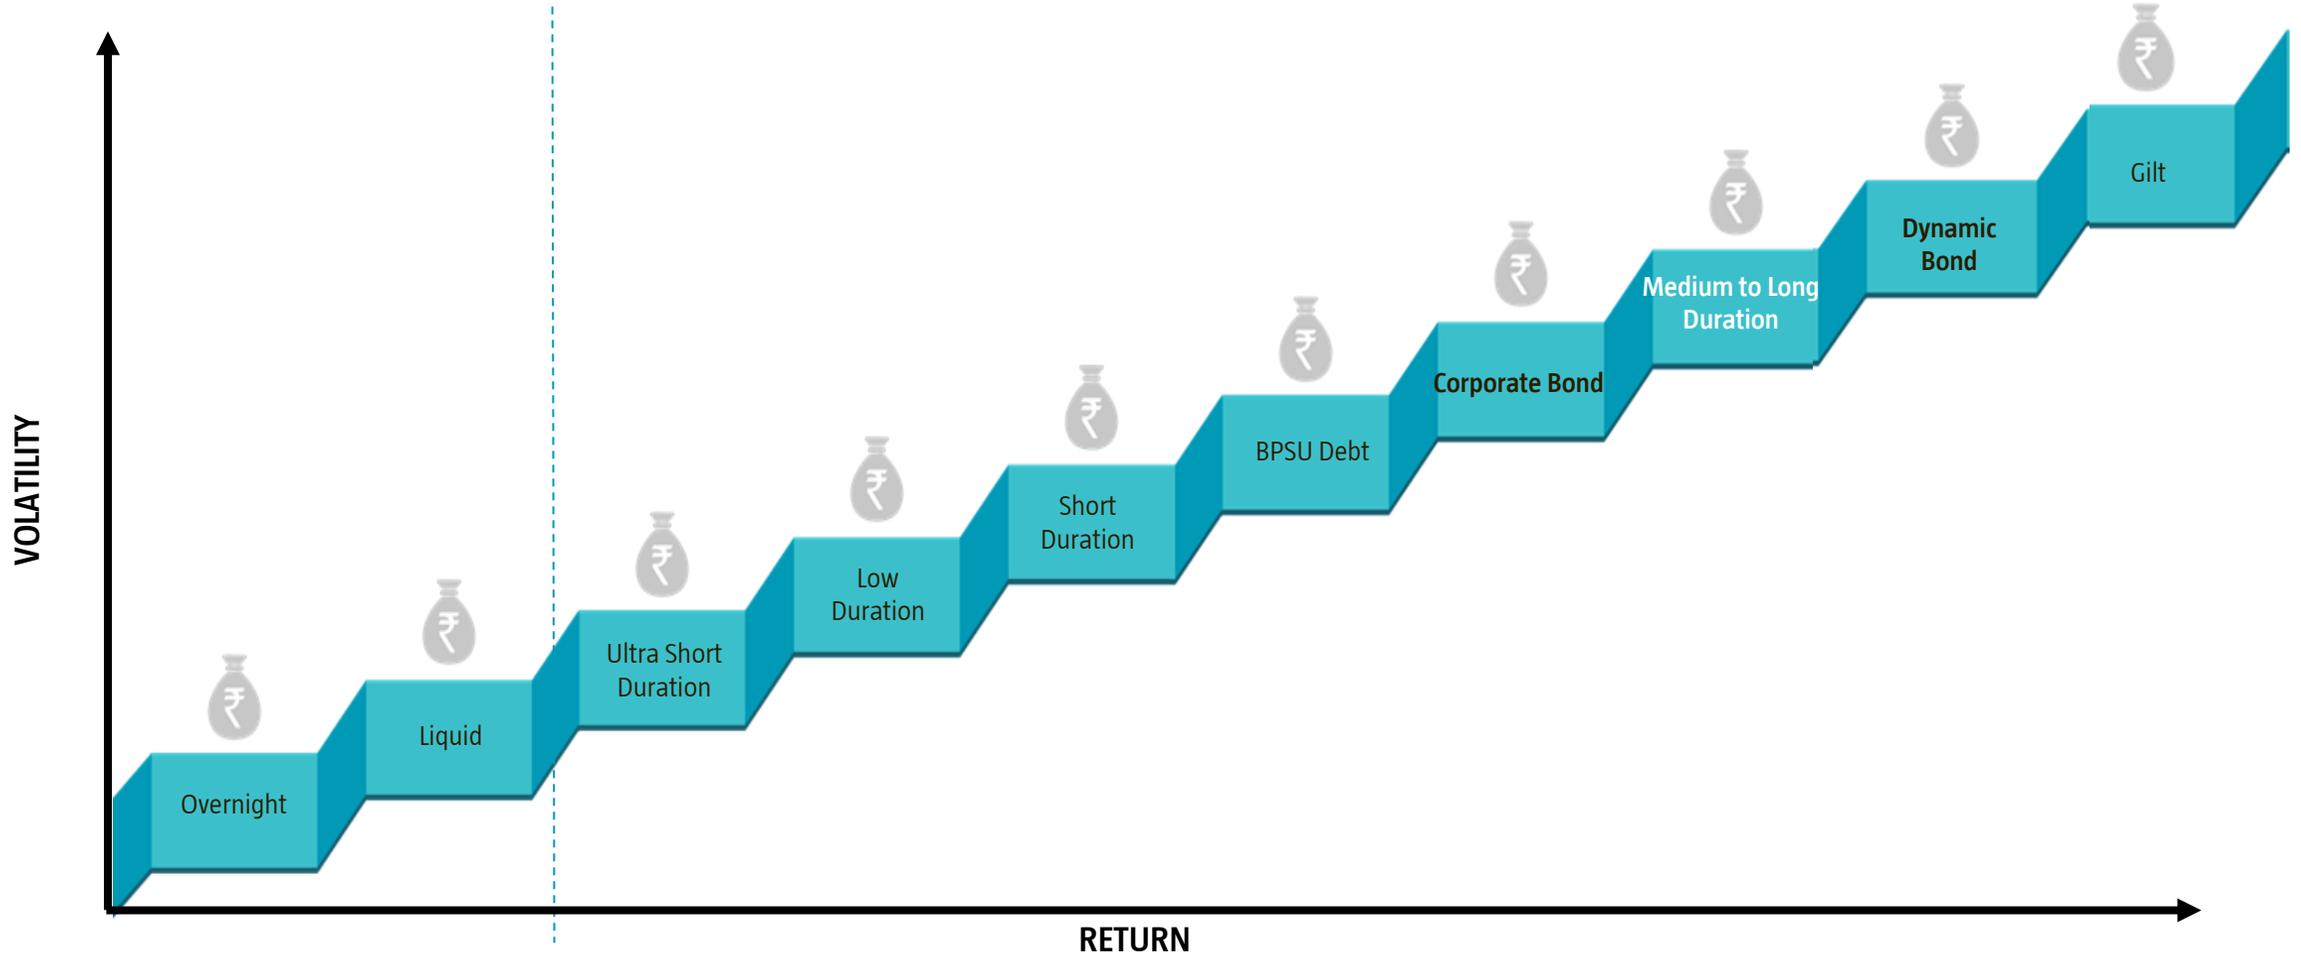

- ❑ An Income Fund aims to earn returns from a combination of accrual interest income and capital appreciation on price appreciation of underlying bond instruments
- ❑ The Fund uses duration in its favour as the fund manager takes a call on the interest rates and the credit quality of the underlying bonds
- ❑ The fund has a duration bucket between 4 and 7 years and hence the fund occupies a mid-segment space between the long duration and the short duration bonds, thereby offering a balance between the long term and the short term bond funds
- ❑ It is suitable for investors with a medium to long time horizon. Investors looking for exposure to bonds in their portfolio and having medium to long term investment horizon should look at this fund

WHERE IS INCOME FUND POSITIONED

- ❑ Income Funds are more volatile than liquid / overnight funds but less volatile than long duration funds and gilt funds
- ❑ Since most of the portfolio contains corporate and government bonds with a medium to long maturity, it aims to provide higher risk adjusted returns
- ❑ The portfolio is designed in a way to help generate stable returns while bringing down volatility relative to a long term debt fund
